

# LEDGER

PROJECT BILLING RECONCILIATION

---

## User guide: billing every hour, cost and subcontract — once, and only once.

LEDGER sits beside Procore and turns the costs on a project into client invoices and change orders, while keeping track of what has already been billed, budgeted or written off. This guide covers the project sidebar, the company dashboard, and what's coming next.

# 00 What LEDGER is for

Every project collects costs in Procore: T&M tickets from the field, direct costs (receipts, expenses, payroll), subcontracts and purchase orders, and the change orders on them. Some of those costs get billed to the client; some are already covered by the contract; some we choose not to bill. Without a single record of which is which, costs slip through unbilled — or get billed twice.

**LEDGER is that record.** It lists every billable cost on a project, lets you bill it to the client in a few clicks (it builds the Change Event, Change Order and invoice in Procore for you), and remembers what happened to every item, so the next person on the project sees exactly what's left.

## Every record has one of four statuses

|                                                                              |                                                                                                           |                                                                                |                                                                                                     |
|------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| <b>UNBILLED</b><br>Still needs a decision.<br>This is the list to work down. | <b>BILLED</b><br>On a client invoice or draft change order — by LEDGER, or marked <i>Already Billed</i> . | <b>BUDGETED</b><br>Covered by the contract or budget. Never billed separately. | <b>WRITTEN OFF</b><br>Not billed to the client, with a reason (warranty, goodwill, PM decision...). |
|------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|

A record can be a whole T&M ticket, direct cost or commitment, or individual lines on one — so you can bill part of something and decide on the rest later.

## Two ways in

|                                                                                                                                                                                    |                                                                                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SECTION 1 • PROJECT LEVEL</b><br><b>The LEDGER sidebar</b> — opens inside Procore on any project (or on your phone). This is where you bill, mark and review a project's costs. | <b>SECTION 2 • COMPANY LEVEL</b><br><b>The LEDGER dashboard</b> — a web page with every project at once: margin, invoicing and how many records are still unbilled, by PM, region and stage. |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Signing in and access

Both use your **Einbau ID** — the same login as PUNCH, TALLY, HANDOFF and the other Einbau apps. Access is set in HELM. Most people have one of four LEDGER levels:

| LEVEL           | IN SHORT                                                                                      |
|-----------------|-----------------------------------------------------------------------------------------------|
| Viewer          | Can see everything, change nothing.                                                           |
| PM / Accounting | Can bill, mark records and change Project Settings; can undo their own marks.                 |
| Admin           | All of the above, plus undo anyone's marks, source-record drill-down and bulk reconciliation. |

If LEDGER says you don't have access, ask Ben to grant it in HELM. If a button you expect isn't there, your level doesn't include it.

**LEDGER prepares; a person submits.** Invoices LEDGER creates are left as drafts in Procore for you to review and submit. Questions or problems: contact Ben Wright.

## SECTION 01

# The project sidebar

Bill, mark and review the costs on one project — without leaving Procore.

Procore → any project → side panel → LEDGER · or `ledger-sidebar.pages.dev`

### 1.1 Opening LEDGER

- 1 Open the project in Procore (the Prime Contract page is a good place — LEDGER will bill to that contract).
- 2 Open the side panel and choose **LEDGER**.
- 3 Sign in with your Einbau ID the first time. LEDGER keeps you signed in for about two weeks of use.

Away from Procore — on a phone or laptop — go to **ledger-sidebar.pages.dev**, search for a project by name or number, and pick it. On a phone, use *Add to Home Screen* and LEDGER opens like an app.

The  button pops LEDGER out into a full browser window when the sidebar feels cramped.

### 1.2 Pick what you're doing first

| CHOOSE             | WHEN                                                                                                                                                               |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Create Invoice     | You're ready to bill: LEDGER builds the change order, approves it, creates the invoice and fills every line to 100%. You review and submit the invoice in Procore. |
| Push to CO (draft) | You want a draft Change Order to review with the client or a PM first. Nothing is invoiced.                                                                        |
| Review Project     | See everything on the project by status, mark records, and undo past marks. No billing here.                                                                       |
| Project Settings   | Set this project's default rates, markups and grouping so you don't retype them every time.                                                                        |

### 1.3 Project Settings

Per-project defaults that pre-fill every invoice: labour rates (regular, overtime, double time, per diem), markup for direct costs and for commitments, how lines are grouped, the billing mode (T&M or fixed price — normally taken from the Procore project type), and a default Prime Contract. Leave a field blank to use the company default. You can still override any of them on a single invoice.

## 1.4 Creating an invoice

- 1 **Pick items.** Three tabs: *T&M Tickets*, *Direct Costs* and *Commitments*. Tick whole items, or expand one and tick individual lines. You can mix all three in one invoice.
- 2 **Configure.** Check the Prime Contract, invoice number (LEDGER suggests the next one), billing date and billing period. Adjust rates, markups and how lines are grouped. Your Project Settings fill these in.
- 3 **Invoice as...** choose *Change Order on the Prime Contract* (normal) or *Standalone* — a new Prime Contract just for these costs, for pass-through items like materials or travel.
- 4 **Preview.** See exactly what the client will see. Edit line descriptions; pop the preview out if it's long.
- 5 **Confirm** and watch the progress. When it's done you get a link to the draft invoice — open it in Procore and submit it as usual.

T&M TICKETS DIRECT COSTS **COMMITMENTS**

■ SC-0042 \$12,400  
ML Solutions · Subcontract · Approved

■ SC-0042 · CO #001 \$680  
Change Order to SC-0042 · Approved

□ PO-0017 \$2,275  
Home Depot · Purchase order · Approved

2 items · \$13,080 **CONFIGURE** → ALREADY BILLED

COMMITMENT CHANGE ORDERS SIT UNDER THEIR COMMITMENT

### Good to know

- **Markup** is added for direct costs and commitments; T&M bills at your labour rates. Both default from Project Settings.
- **Commitment change orders** (approved only) appear right under their subcontract, or on their own once the subcontract is billed.
- **Hours already billed** on a T&M ticket can't be billed again from a subcontract (and vice versa). LEDGER blocks it.
- **Labour on a subcontract** gets a warning first — it's usually better billed from the T&M ticket or marked as budgeted.
- **Older projects** (created before October 11, 2026) show a reminder to clean up first: mark what's already been billed, budgeted or written off before billing commitments.

## 1.5 Marking records you won't bill through LEDGER

From any list you can mark ticked items instead of billing them. Each mark moves them out of Unbilled:

| MARK                    | USE IT WHEN                                                                                                                                   |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Already Billed</b>   | It was invoiced outside LEDGER (by hand in Procore, or before LEDGER). Add the invoice number. It counts as billed and can't be billed again. |
| <b>Mark as Budgeted</b> | It's covered by the contract or budget — the client won't see it as a separate charge.                                                        |
| <b>Write Off</b>        | We're absorbing it. Pick a reason (warranty, service call, goodwill, PM decision, other) and add a note.                                      |

## 1.6 Reviewing a project

**Review Project** opens with a summary table — T&M, direct costs and commitments against Unbilled, Billed, Written off and Budgeted — then a tab for each status. Use it to work down the Unbilled list, check what's been billed and on which invoice, and **Undo** a mark or a draft push if something was wrong.

**Undo only changes LEDGER's record.** If you undo an invoice, delete it (and its change order) in Procore first — LEDGER will then let you bill those items again. PMs can undo their own marks; admins can undo anyone's.

**"Reconciled as Already Billed by..." banner?** An admin closed out this project's old records in bulk from the dashboard. Anything new since then shows as Unbilled as normal. Those bulk records can only be reopened together, by an admin.

## SECTION 02

# The company dashboard

Every project at once: how much is invoiced, how margin is tracking against budget, and how much is still waiting to be billed.

[lambwright.github.io/ledger](https://lambwright.github.io/ledger) · or the LEDGER tile in any Einbau app's switcher

Illustration — figures are examples.

## 2.1 Reading the headline

- **Margin to date vs budgeted** — margin earned so far on what's been invoiced, next to the margin the job was budgeted at. Green when a project is at or above budget, amber when behind, red when negative.
- **LEDGER records** — how many T&M tickets, direct costs and commitments are Unbilled, Billed, Written off and Budgeted. *Unbilled* is the number to drive down.
- **Totals** — costs, invoicing, contract value, what's left to invoice, and what's left to pay out on subcontracts.

Every headline number follows your filters: pick a department and you're looking at that PM's projects only.

**Budgeted % marked Q** is the original quote — original contract against original budget, excluding pass-through contracts — held until the project's budget is changed in Procore. This stops change orders from making budgeted margin look better than it is. Once budget changes are made, it follows Procore's live budget.

## 2.2 Finding projects

Search by name or number, and filter by **stage** (tick several at once), **region**, **department** (our PMs) and **invoicing** (not fully invoiced / fully invoiced). Click any column heading to sort. Cancelled, warranty, overhead and inactive projects are left out.

## 2.3 Opening a project

- 1 Click a row. LEDGER refreshes that project from Procore so you're looking at today's numbers.
- 2 The detail shows direct costs, subcontractor invoices, committed costs and record counts.
- 3 **OPEN IN LEDGER** ↗ jumps straight into that project's sidebar to bill or review it; **OPEN IN PROCORE** ↗ opens the project itself.
- 4 Admins also get **SHOW SOURCE RECORDS** — every direct cost, subcontractor invoice and owner invoice behind the numbers, with a warning if costs are sitting on codes that aren't in the budget.

## 2.4 Clearing old records in bulk (admins)

Older projects carry hundreds of records nobody will review line by line. Admins can tick projects (or filter and tick all), choose **Mark reconciled...**, and set everything still Unbilled on them to *Already Billed*, *Budgeted* or *Written Off* in one go. LEDGER works through them in the background and flags each project "Reconciled". Records that arrive later still show as Unbilled. An admin can **Reopen project** to put the whole batch back to Unbilled.

## 2.5 How fresh are the numbers?

LEDGER refreshes every active project from Procore at least daily on its own, and immediately when you open one. It pauses its background work whenever someone is using LEDGER, so billing is never slowed down by it. The *Updated* column shows when each project was last refreshed.

## ROADMAP

# Where LEDGER is going

What's planned, roughly in order. Plans change as the team uses LEDGER — tell Ben what would help you most.

### NOW

#### Permissions by role

Each person's LEDGER access follows their job role, set once in HELM — viewers can look, PMs and accounting can bill, admins can tidy up.

### NOW

#### LEDGER on your phone

Already installable from the browser. Next: full details shown inside the app, and larger, easier-to-tap controls for invoicing from site.

### NEXT

#### Budgeted margin from the estimate

Use the margin on the approved estimate as each job's budgeted margin, so the dashboard compares every job to what it was sold at.

### NEXT

#### Projects that start set up

When a won bid is handed off in HANDOFF, the new project arrives in LEDGER with its labour rates and markups already set.

### NEXT

#### Project overview

One page per project: billed versus cost by source, what's waiting and for how long — plus, for quoted jobs, which billing periods have been invoiced and where the gaps are.

### NEXT

#### Instant updates

The dashboard updates the moment something changes in Procore, instead of on its daily round.

### LATER • AI-ASSISTED

#### A LEDGER assistant that knows your projects

Built on the project information already gathered by SCOUT and HANDOFF — the PO, the quote, the handoff brief — and on LEDGER's own billing records.

- **Scope review** — "Is this ticket in scope?" answered against the actual PO and quote, before you bill or write it off.
- **Agentic billing** — ask in Teams: "bill this week's T&M on KPS". It prepares the invoice, shows you, and only submits once you confirm. Every action is logged.
- **Quoted-project billing** — progress invoices on fixed-price jobs prepared automatically against the contract's schedule of values.
- **Answers on demand** — "What's unbilled on Chris's jobs?" or "How is margin tracking on Costco?" without opening a report.

### ALSO LATER

**Travel and per diem rules** — mileage, per diem and travel time billed the same way on every job. **Flag a cost for removal** — mark a cost that doesn't belong on the project so accounting can move it.
